| Application recommendations                           | Stir well prior to use and during application. Do not overbrush. Do not apply wet-in-wet. Avoid excessive wet films to avoid the formation of curtains and through drying problems.   |  |  |  |  |
|   | Avoid painting in direct sunlight or too much wind. A rapid loss of solvents will occur under these conditions and degrease the flowing ability. The application and drying should occure in well ventilated areas. Always secure sufficient air circulation for supply of fresh air and disposal of solvent fumes and in order to avoid drying problems. |  |  |  |  |
| Theoretical coverage                                  | 8-10m² per liter @ 45µm dry filmthickness   |  |  |  |  |
| Practicle coverage                                    | Dependent on condition and structure of wood, loss of material due to factors such as application technique, shape of object, circumstances during application.   |  |  |  |  |
| Substrate conditions                                  | Temperature of paint, object and work area during application and drying should not be lower than 10°C. Relative air humidity should not exceed 85%.  |  |  |  |  |
